Daconil (tetrachloroisophthalonitrile).

PESTICIDE PETITION No. 7F0 743

Diamond Shamrock Company
Painesville, Ohio
(AF 25-202)

February 12, 1969

File: 7F0743

Attached is an evaluation by E. L. Long, Pathology Branch (SC-940), of all the toxicological data related to Daconil. From this evaluation two points are clear: first, that we are in no position to grant the proposed tolerance on the basis of the data as we have it now; second, that the possibility that a "no effect" level can be assigned on the basis of data from studies already completed or in progress exists. Dr. Long's summary is addressed to this second point. We suggest that the petitioner be apprised of Dr. Long's suggestions and conclusions so that they may elect to attempt resolution if they so desire.

CONCLUSION:

1. Toxicity data are not sufficiently conclusive to establish safety of the proposed tolerance.
2. The petitioner should be made aware of deficiencies as stated in the final summary of Dr. Long's memo.
